Engineer Software

Developed 100 web applications using HTML/HTML5

Developed 100 web applications using HTML/HTML5, CSS/SCSS, Django, WordPress, and Joomla, ensuring diverse online presence.

2003 – 2014

100

web applications built

Situation. Clients wanted web applications, and they wanted very different things — different scales, different budgets, different levels of "just get me online" versus "build me something custom." Meeting that meant being versatile rather than forcing every client down the same technology.

Task. Building web applications that gave each client a diverse, effective online presence was the job.

Action. A hundred web applications got built, and the point was matching the tool to the job rather than having a favourite. Where a client needed something custom, that was HTML/HTML5, CSS/SCSS and Django; where they needed something more standard that they could also manage themselves, WordPress or Joomla was the faster, more sensible answer. Part of the skill was knowing which was which — talking a client out of a bespoke build they didn't need, or into one they did.

Result. The hundred applications gave clients a varied, capable online presence, each delivered on the technology that actually fit it. Matching the approach to the client rather than the other way round is what made them effective rather than just delivered.

Bring this experience to your project

Use “Developed 100 web applications using HTML/HTML5” as a starting point for a similar challenge in your organisation. The services behind this work are available for your project. Interfaces that load quickly, work on a phone and behave the same in every browser your customers happen to use.

Need a website or web app built?

Talk through your project with the engineer responsible for delivery. We agree the scope, price basis and handover in writing before work begins.

Role context: Full Stack Web Developer. It draws on Backend Engineering, Frontend Engineering, Full-Stack Development, Web Development and Python. And while you are here, we are rather good at Frontend Development, Full-Stack Product Development and Website Development & CMS.
